

OPENING NEW DOORS

SERVICE

FOR SERVICE BAYS

*Service Reception Entrance, Spiral® FV Door*

**IMAGINE YOUR CUSTOMERS BEING AS IMPRESSED WITH YOUR SERVICE DOORS AS THEY ARE WITH YOUR SERVICE**

Rytec high speed, high performance doors offer a number of benefits to service bays:

**LOWER MAINTENANCE COSTS:** Rytec doors are engineered for high-traffic, high cycle environments and require minimal maintenance. Since bumps will happen, Rytec fabric roll doors are designed to withstand vehicle impact and be reset, without tools, in just seconds.

**LOWER ENERGY COSTS:** The speed and seal of the door lead to less air infiltration and better climate control, resulting in lower heating and cooling costs.

**INCREASE PRODUCTIVITY:** Waiting periods for conventional overhead doors are eliminated. The time saved over a year can easily justify the cost of the doors.

**IMPROVED WORKING ENVIRONMENT:** Rytec doors help improve the working environment by better maintaining service department temperatures and offering a modern architecturally inspired look.

**WHISPER QUIET OPERATION:** The door's smooth operation reduces noise levels near the entrances to the service bays as well as the service write-up area. This further improves the working environment and offers less disruption to customers and technicians during the service write up.

**HIGH WIND LOADS:** The Spiral® HZ door is the first and only high performance door engineered and certified to withstand a Category 4 hurricane. Certified compliance with Miami Dade County and The Florida Building Codes.
